

Efacec joined the CharIN e.V Association

Efacec Electric Mobility joined the CharIN e.V association as Regular Member in order to contribute to the ongoing development and adoption of the Combined Charging System (CCS) through its know-how and expertise in EV charging.

Being a worldwide leader in fast charging, developing and producing electric vehicle chargers for several segments and applications, it was one of the first companies to adopt the CCS protocol in fast charging. Motivated by the CCS potential usage and growth of the Protocol and the credible founders and members board, Efacec believes that this partnership will bring benefits in terms of information sharing and market development for both parties.

Efacec believes it will be a support on the development of innovative ideas and strategies, bringing to this partnership between CharIN e.V and Efacec Electric Mobility all conditions to facilitate, motivate and accelerate the adoption, in a global perspective, of the CCS standard.
